

Rejuvaderm MediSpa first in New England to offer new technology for skin treatment **Fraxel re:store® Dual System by Solta Medical**

Cranston, Rhode Island — Dr. Ellen H. Frankel with Rejuvaderm MediSpa announced that she is now offering treatments with the Fraxel re:store® Dual system by Solta Medical. The Fraxel re:store Dual system is a revolutionary new laser technology which alters skin damage. Rejuvaderm MediSpa is the first facility in the New England area to offer this innovative procedure exclusively. Dr. Frankel uses the latest and most advanced technologies to provide her patients with superior results.

Dr. Frankel stated that “for years, we researched many types of devices and concluded that Fraxel re:store® Dual system was the best option for minimal recovery time.” The Food and Drug Administration (FDA) cleared Fraxel re:store® Dual system to treat pigmented lesions, acne scars, melasma, mild to moderate periorbital rhytids, surgical scars and actinic keratosis. It addresses both deep and superficial resurfacing indications with maximum efficiency and safety, to treat women and men of all ages and skin color, anywhere on the body.

The Fraxel re:store® Dual system is the newest model and incorporates two wave lengths within one unit, offering benefits to both the patient and to the medical practitioner. Some of the benefits that Fraxel re:store® Dual system offers are: more precise treatments, an accelerated removal of unwanted coloration, improved comfort for patients, the ability to treat large and multiple areas on the body, and decreased procedure time. “The results of the treatment are immediate and progressive. Soon after the treatment your skin will feel softer, look brighter and have a more even tone” Dr. Frankel continued “the next 3 to 6 months you will notice more improvement as the deeper layers of the skin continue to heal.”

Deana DeGeorge, 38 of North Providence said “I recently had a Fraxel Laser Treatment done on my face. My pigmentation is gone, my skin looks fresher, and my acne scars have lightened. I am very excited to have a second treatment done and see my skin improve even more. This has been a very positive experience for me and has given me more self confidence when I look in the mirror.”

Typically, patients receive their desired outcomes in 3-6 treatments. The number of treatments you will need will depend on your skin condition as well as your desired goals. Results can last for years depending on your age and skin condition. Dr Frankel advised “You absolutely need to wear SPF daily, as this will prevent any further skin damage.”

For those preferring not to undergo invasive, costly and sometimes traumatic cosmetic surgery treatments, Fraxel re:store® Dual system can help achieve a more youthful appearance with minimally invasive techniques. Physicians can select either the deep penetrating laser or the new, more superficial laser to accelerate clearance of unwanted pigmentation.

To schedule a consultation with Dr. Ellen Frankel to see what treatment with Fraxel re:store® Dual system can do to improve the appearance and texture of your skin, please call (401) 944-SKIN or visit us online at www.rejuvadermmedispa.com.

About Rejuvaderm MediSpa

Dr. Ellen Frankel has owned and operated Rhode Island Skin Doc, a private medical practice since 1987, and has been Chief of Dermatology at St. Joseph’s Hospital since 1995. Patients were always asking for referrals of where to go for Laser, massage, and other esthetic services. Dr. Frankel had always wanted to open a Medispa because she felt there was a need to have quality medical based treatments in a state of the art, medical facility.

The practice and the spa work together. Patients are referred to the appropriate esthetic nurse, esthetician or massage therapist depending on their needs and desires. They are first seen by one of the practitioners in the medical practice and then taken over to the spa. This facility is different from a spa or salon because they have medical personnel on the premises at all times. They are also constantly receiving the latest medical training and recertification, and upgrading the lasers and other medical equipment when the technology improves. www.rejuvadermmedispa.com.
